Candy Canes

Materials

- Candy canes
- Water
- Oil
- Vinegar
- 3x cups/glasses

Instructions

1. Fill each cup with the same amount of each liquid.
2. Place 1 candy cane into each cup so that each is submerged in the liquid to the same level.
3. Observe over the coming days which candy cane dissolves the fastest. Make predictions about which will disappear first!
4. Try this experiment using 3 different temperatures of water instead of different liquids.
5. Try melting one in a hot chocolate and taste test!
